## Remanufacturing the Samsung Xpress M2020 MLT-D111S toner cartridge

By Mike Josiah and the Technical Staff at Uninet

# Remanufacturing the Samsung Xpress M2020 MLT-D111S toner cartridge

By Mike Josiah and the Technical Staff at Uninet

First released in May 2014, the Samsung Xpress M2020 series of printers are based on a 21ppm, 1,200dpi engine. The first page out is stated to be under 8.5 seconds, and all “W” models so far come with Wi-Fi, Samsung Mobile Print, Google Cloud Print, AirPrint and NFC (near-field communication) features built in.

The M2020 comes with 64MB memory, and the M2070 comes with 128MB memory installed (fixed amounts). Both have a duty cycle of 10,000 pages per month.

These cartridges do not have a built-in drum cover, but do come new with an orange plastic cover (see Figure 1). The replacement cartridge itself is rated for 1,000 pages at five percent coverage (ISO 19752). The starter cartridge is rated for 500 pages.

Figure 1

## Printers based on this engine:\*

Samsung Xpress M2020W

Samsung Xpress M2070FW  
Samsung Xpress M2070W  
Samsung Xpress M2071FH  
Samsung Xpress M2071W  
Samsung Xpress M2070FW

\*as of 4/1/15

## REQUIRED TOOLS

- Toner-approved vacuum
- A small common screw driver
- A Phillips head screwdriver
- Needle nose pliers
- Chisel blade knife
- Electric drill
- #29 drill bit (see supplies needed right)

## REQUIRED SUPPLIES

- Replacement toner for use in the Samsung M2020
- Dedicated wiper blade
- Replacement chip
- Conductive grease
- Drum lubricating powder
- If using the #29 drill bit, we recommend #8 x ¼” self-tapping screws. If not, make sure you match the drill size to your screws, and the screws cannot be longer than ¼” (6.35mm)

## STEP ONE

Place the cartridge with the handle facing away from you. Slice off the three plastic rivets with a square Xacto-type blade on the contact (chip side) end cap.

## STEP TWO

Gently pry off the end cap. The end cap looks like it's in two pieces but it's not. Be careful not to break it when removing.

## STEP THREE

On the opposite side of the cartridge, slice off the four plastic rivets with a square Xacto-type blade.

## STEP FOUR

Gently pry off the end cap. This one is actually in two pieces.

## STEP FIVE

Lift off the waste chamber.

## STEP SIX

Slide the drum axle out from the hub side and remove the drum.

## STEP SEVEN

Remove the PCR. Make sure the holders stay in place.

## STEP EIGHT

Remove the two screws and wiper blade from the waste chamber.

## STEP NINE

Remove the large drive gear.

## STEP TEN

Clean out any remaining toner from the waste chamber. Be careful to keep the wiper blade seal clean.

## STEP ELEVEN

Re-install the wiper blade and two screws.

## STEP TWELVE

Clean the PCR with your normal PCR cleaner and install in the cartridge. Make sure the guides fit in place and the rollers fit into the holders properly.

**WARNING:** Do not clean the OEM PCR with alcohol, as this will remove the conductive coating from the roller. If the PCR is an aftermarket, follow the cleaning methods recommended by the manufacturer. If the PCR is an OEM, we recommend it be cleaned with your standard PCR cleaner.

## STEP THIRTEEN

Install the hub gear side first, then slide the axle through the gear and cartridge wall.

## STEP FOURTEEN

Install the large drive gear.

## STEP FIFTEEN

Remove the three gears as shown and place aside. Remove the developer roller gear by squeezing the tab on the shaft.

## STEP SIXTEEN

Remove the developer roller inner plate and screw on the gear side of the cartridge. Remove the developer roller sleeve (see Figures A, B and C).

## STEP SEVENTEEN

Until new replacement fill plugs are available, leave the plug in place. The OEM plugs are very brittle and break easily.

## STEP EIGHTEEN

Remove the two screws on the doctor blade and blade.

## STEP NINETEEN

Clean out any remaining toner from the hopper through the developer roller/doctor blade hole.

## STEP TWENTY

Clean the feed roller and any remaining toner from the hopper seals.

## STEP TWENTY-ONE

Fill the hopper with toner for use in the M2020 cartridge.

## STEP TWENTY-TWO

Clean and re-install the doctor blade and two screws.

It is highly recommended that the doctor blade be cleaned. Failure to do so will cause streaking. Dampen a cotton swab with alcohol, and clean the blade. Be careful not to press too hard and damage the blade. If the blade has a heavy build-up of toner on it, clean it with acetone, and then alcohol.

## STEP TWENTY-THREE

Install the developer roller.

## STEP TWENTY-FOUR

Install the inner plate and screw.

## STEP TWENTY-FIVE

Install the four gears as shown in the order indicated. You may need to press on the auger gear to seat gear # 4 properly.

## STEP TWENTY-SIX

Place the two halves together. Make sure the two springs fit in their respective points.

## STEP TWENTY-SEVEN

Install the gear-side end caps (two pieces). Install the top piece first.

## STEP TWENTY-EIGHT

Drill a hole where the four rivets were and install the screws.

## STEP TWENTY-NINE

Install the replacement chip on the contact end cap by sliding it out from the inside of the end cap. Replace the chip, making sure it's seated properly.

## STEP THIRTY

Install the end cap, drill the three holes and install the screws.

## STEP THIRTY-ONE

Install the drum cover on the cartridge.

## READER OFFER

### AF20 TONER FILLING MACHINE

#### SMALL-SIZED TONER FILLING MACHINE

A compact toner filling machine that requires minimal installation and operation space, and allows you to fill toner cartridges as part of your production process.

For low-volume, prototype usage, use one machine. Use one machine and four hoppers (one per colour) for niche product remanufacturing, or four machines for high-density working.

The AF20 is manufactured in the EU, comes with a 12-month guarantee and utilises a 100/240Vac to 12Vdc power adapter for use in most countries. Stable, accurate and reliable.

#### Offer 1

- 1 x AF20 base unit
- 1 x patent-pending filling funnel
- 1 x 10Kg capacity stainless steel hopper

**Offer price €2,995 + VAT**

#### Offer 2

- 4 x AF20 base unit
- 4 x patent-pending filling funnel
- 4 x 10Kg capacity stainless steel hopper

**Offer price €9,995 + VAT**

#### Offer 3

- 1 x AF20 base unit
- 4 x patent-pending filling funnel
- 4 x 10Kg capacity stainless steel hopper

**Offer price €4,495 + VAT**
